Case No: 4:22-cv-01315

PATENT CASE

JURY TRIAL DEMANDED

COMPLAINT

Plaintiff Social Positioning Input Systems, LLC (“Plaintiff” and/or “SPIS”) files this Complaint against Sewio, LLC (“Defendant” and/or “Sewio”) for infringement of United States Patent No. 9,261,365 (hereinafter “the ‘365 Patent”).

PARTIES AND JURISDICTION

1. This is an action for patent infringement under Title 35 of the United States Code. Plaintiff is seeking injunctive relief as well as damages.

2. Jurisdiction is proper in this Court pursuant to 28 U.S.C. §§ 1331 (Federal Question) and 1338(a) (Patents) because this is a civil action for patent infringement arising under the United States patent statutes.

3. Plaintiff is a Wyoming limited liability company with an address of 1 East Broward Boulevard, Suite 700, Ft. Lauderdale, FL 33301.

4. On information and belief, Defendant is a Texas Limited liability company with its principal office located at Viren Mathuria at 4521 Maple St. Bellaire, TX 77401. On information and belief, Defendant may be served through its agent, Viren Mathuria, at the same

address.

5. On information and belief, this Court has personal jurisdiction over Defendant because Defendant has committed, and continues to commit, acts of infringement in this District, has conducted business in this District, and/or has engaged in continuous and systematic activities in this District.

6. On information and belief, Defendant's instrumentalities that are alleged herein to infringe were and continue to be used, imported, offered for sale, and/or sold in this District.

VENUE

7. On information and belief, the venue is proper in this District under 28 U.S.C. § 1400(b) because Defendant is deemed to reside in this District. Alternatively, acts of infringement are occurring in this District, and Defendant has a regular and established place of business in this District.

COUNT I **(INFRINGEMENT OF UNITED STATES PATENT NO. 9,261,365)**

8. Plaintiff incorporates paragraphs 1 through 7 herein by reference.

9. This cause of action arises under the patent laws of the United States and, in particular, under 35 U.S.C. §§ 271, *et seq.*

10. Plaintiff is the owner by assignment of the '365 Patent with sole rights to enforce the '365 Patent and sue infringers.

11. A copy of the '365 Patent, titled "Device, System and Method for Remotely Entering, Storing and Sharing Addresses for a Positional Information Device," is attached hereto as Exhibit A.

12. The '365 Patent is valid, enforceable, and was duly issued in full compliance with Title 35 of the United States Code.

13. Upon information and belief, Defendant has infringed and continues to infringe one or more claims, including at least Claim 1, of the ‘365 Patent by making, using (at least by having its employees, or someone under Defendant's control, test the accused Product), importing, selling, and/or offering for sale associated hardware and software for asset locating services (e.g., Sewio RTLS), and any associated hardware, apps, or other software) (“Product”) covered by at least Claim 1 of the ‘365 Patent. Defendant has infringed and continues to infringe the ‘365 patent either directly or through acts of contributory infringement or inducement in violation of 35 U.S.C. § 271.

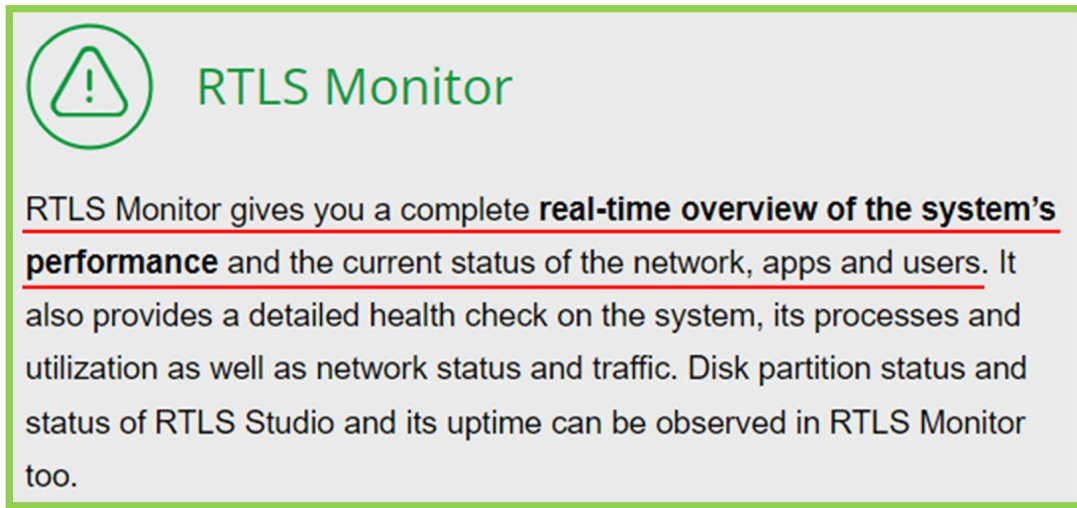

14. The Product provides an asset tracking system for real-time GPS tracking of assets. A user can receive location information on a positional information device (e.g., mobile device or computer). Certain aspects of this element are illustrated in the screenshot(s) below and/or in those provided in connection with other allegations herein.

Source: <https://www.sewio.net/uwb-tags/>

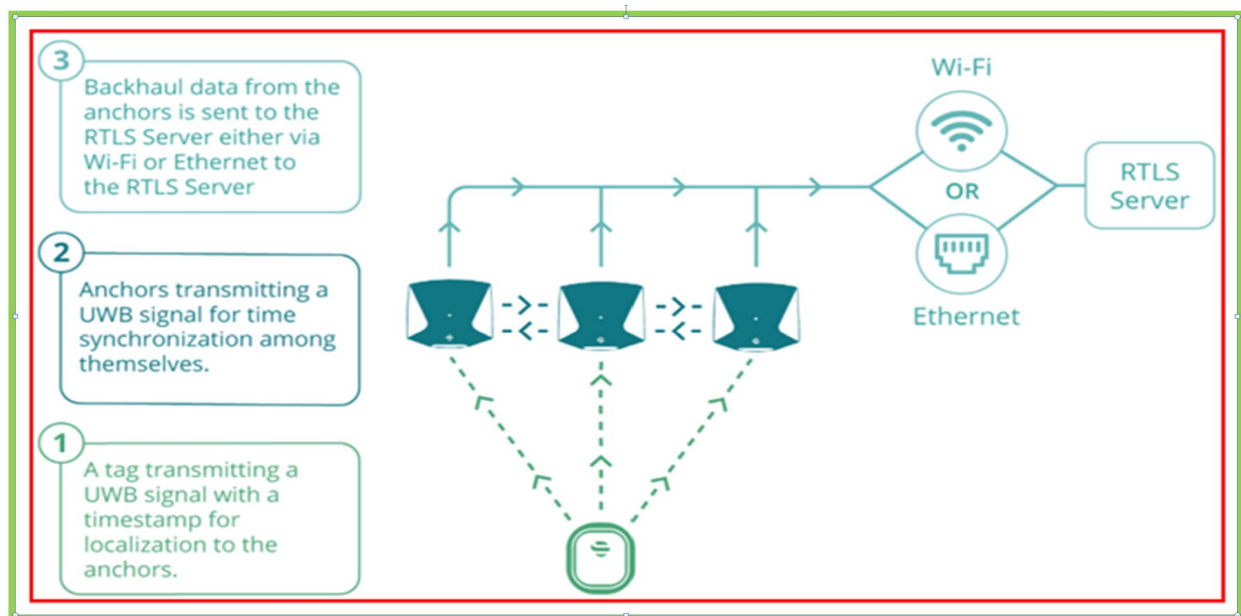

To track entities within a facility, anchors must be deployed on the ceiling to receive the signals transmitted from the tags attached to the entities that need to be tracked. Anchors receive the signals from the tags and forward them to a server, which then calculates the real-time location of the entity. The **same infrastructure** created by the anchors' network can be used for tracking **any type and number of objects** at the same time.

15. The Product software sends a request from a first (requesting) positional information device (e.g., mobile device or desktop with software installed) to a server. The request is for the real-time location (e.g., stored address) of an asset, and includes a first identifier of the requesting positional information device (e.g., user ID and password for the Product software used in the particular enterprise). The request is sent to the Product server for transmitting the asset location. The server receives at least one address from a second (sending) positional information device at the asset (e.g., employee mobile phone). Certain aspects of this element are illustrated in the screenshot(s) below and/or in those provided in connection with other allegations herein.

Source: <https://www.sewio.net/real-time-location-system-rtls-on-uwv/#>

The Sewio UWB RTLS Platform consists of **two types of hardware**: signal transmitters, called Tags, used for tracking the entities and signal receivers, called anchors, used for receiving the signals from Tags.

Tags are small electronic devices that are attached to any object or individual that needs to be tracked. The tags serve as a transmitter, sending out blinks that are received by anchors and forwarded to the location server for calculating the tags' positions.

Source: <https://www.sewio.net/real-time-location-system-rtls-on-uwv/#>

Anchors are electronic devices that detect the UWB pulses emitted by UWB Tags and then forward them to the location server for calculating tag positions. To cover an area with an indoor tracking system, a set of anchors needs to be installed above the area to create the location infrastructure.

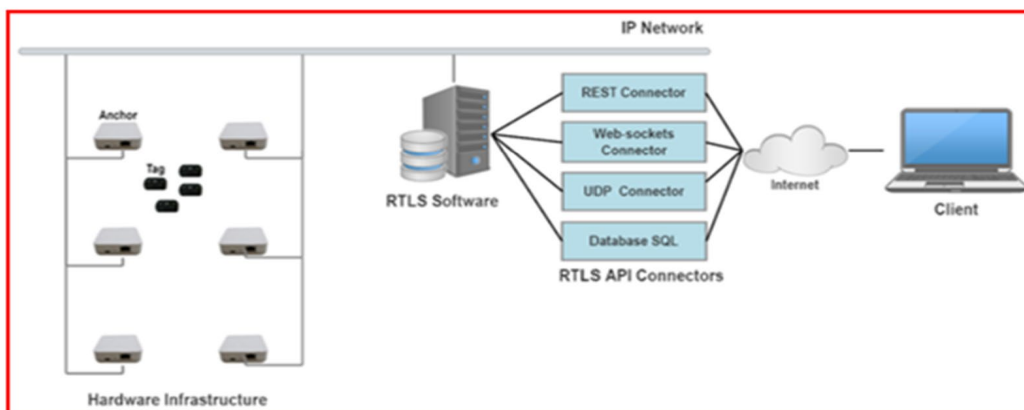

The screenshot shows the Sewio portal login page. It features the Sewio logo at the top, followed by input fields for Email and Password. Below these fields is a green LOG IN button. At the bottom, there are links for "Forgot your password?" and "Don't have an account? Contact us!"

RTLS Studio provides comprehensive API which is used to give the user position data, sensors' data and other related metadata related to indoor positioning such as building information, floorplans and zones.

An overview of the communication architecture can be found in the figure below:

Server: <https://docs.sewio.net/docs/api-3244646.html>

16. At least one address is received from the server at the requesting positional information device. For example, the Product's server transmits the position of an asset (at least one address) to the requesting positional information device. Certain aspects of this element are illustrated in the screenshot(s) below and/or in those provided in connection with other allegations herein.

The Sewio UWB RTLS Platform consists of **two types of hardware**: signal transmitters, called Tags, used for tracking the entities and signal receivers, called anchors, used for receiving the signals from Tags.

17. A second identifier for the second (sending) positional information device is determined based on the first identifier and the server retrieves the at least one address stored in the at least one sending positional information device. The Product application installed on the requesting positional information device requests (from the server) the asset's GPS location (i.e., at least one stored address stored). As shown above, before activating the tracker (i.e., the sending positional information device), a unique tracking device's ID number or credentials (i.e., second identifier) needs to be added to the user's account identified by the user login ID and password (i.e., the first identifier). Hence, the tracker device's ID number or asset credentials (i.e., second identifier) are mapped to the user's login ID (i.e., the first identifier) for tracking the real-time location (i.e., at least one stored address stored) of the asset. Certain aspects of this element are illustrated in the screenshot(s) below and/or in those provided in connection with other allegations herein.

18. Defendant's actions complained of herein will continue unless Defendant is enjoined by this court.

19. Defendant's actions complained of herein are causing irreparable harm and monetary damage to Plaintiff and will continue to do so unless and until Defendant is enjoined and restrained by this Court.

20. Plaintiff is in compliance with 35 U.S.C. § 287.

JURY DEMAND

21. Under Rule 38(b) of the Federal Rules of Civil Procedure, Plaintiff respectfully requests a trial by jury on all issues so triable.

PRAYER FOR RELIEF

WHEREFORE, Plaintiff asks the Court to:

(a) Enter judgment for Plaintiff on this Complaint on all causes of action asserted herein;

(b) Enter an Order enjoining Defendant, its agents, officers, servants, employees, attorneys, and all persons in active concert or participation with Defendant who receive notice of the order from further infringement of United States Patent No. 9,261,365 (or, in the alternative, awarding Plaintiff a running royalty from the time of judgment going forward);

(c) Award Plaintiff damages resulting from Defendant's infringement in accordance with 35 U.S.C. § 284;

(d) Award Plaintiff pre-judgment and post-judgment interest and costs; and

(e) Award Plaintiff such further relief to which the Court finds Plaintiff entitled under law or equity.

Dated: April 25, 2022.

Respectfully submitted,

/s/ Jay Johnson
